Environmental Responsibility Policy

We recognise that our business activities may have an impact on the environment and therefore seek to minimise this as far as is reasonably practicable.

We achieve this by:

- Continually improving our environmental performance by adopting best environmental practice into our business operations.
- Reducing our consumption of resources and continually examining ways of making the most efficient use of them.
- Managing our business operations to prevent pollution and reduce waste.
- Meeting or exceeding all the environmental legislations that relate to the company.
- Ensuring that in the choice of suppliers, environmental criteria is taken into account.
- Working with our Clients to encourage them to improve their environmental performance.

We hold and issue all documents electronically except where this is not possible. We encourage all contractors to submit their invoices by email and all Clients to correspond by email rather than postal mail. Any paper or card mail received is recycled.
